

**Summary of progress since 11/21 meeting:** We finished our MVP since our last meeting. We finished all of our routes and connected them to the frontend of our application. A user can now create a party, add and remove guests, add supplies, claim supplies, and RSVP. We modified model functions to return the right inputs on callback and fixed the bug where the user was getting logged out on refresh. We deleted all unused Fritter code from our repository. We reorganized our App.jsx and Homepage.jsx files.

#### **Achieved Milestones**

- Finish model functions
- Routes!
- Login functionality
- MVP handin
- Peer reviews

#### **Missed Milestones**

- Model tests
- Login functionality in terms of switching username to email and Passport.js

#### **Difficulties encountered**

- Performing some actions updates model but needs page refresh to update in frontend
  - Doesn't seem consistent throughout cases
- Supply list doesn't appear until clicking "Add more supplies"

#### **Changes to problem analysis or design**

- Not implementing text notifications unless we have extra time
- Adding cost to item model in order to implement cost splitting
